

FANS & HEATERS

TOTAL VALUE. TOTAL SYSTEMS.™

DRYING & CONDITIONING

Grain Systems (GSI) manufactures a complete line of rugged aeration and grain conditioning systems to help maintain grain quality. Choose from a variety of high efficiency vane axial, centrifugal, and inline centrifugal fans and heaters, all with features designed to reduce costs and boost performance.

VANE AXIAL FANS

For application requiring high airflow at static pressures below 6", GSI offers vane axial fans in 12" diameter (1 hp) through 28" diameter (15 hp). Vane axial fans 18" and smaller use cast aluminum blades. Vane axial fans 24" through 28" use durable composite airfoil blades that are lightweight for easy starting and function well in this type of environment.

The 12" through 28" (1-15 HP) units feature a 3450 RPM motor for increased fan performance and energy efficiency. Close fan blade tip clearance and straightening vanes provide maximum air flow and reduced turbulence to ensure smooth and consistent airflow.

All 24" and 28" vane axial fans also include an inlet venturi which funnels air more efficiently into the fan. Venturis and grill guards are corrosion-resistant painted for longer life.

INLINE CENTRIFUGAL FANS

Aeration jobs at high static such as with milo, wheat or rape seed require special consideration. Aerating tall hopper tanks presents another challenge. The inline centrifugal fan is designed to handle both of these applications effectively.

Suited for higher static pressures, beyond the performance range of vane axial fans, the inline centrifugal fan offers similar static pressure capabilities to a 1750 rpm centrifugal fan at a lower cost.

Inline Centrifugals can not be used with heaters due to their design.

1750 RPM CENTRIFUGAL FANS

GSI's 1750 RPM centrifugal fans are built with a heavy galvanized steel, scroll-type housing and inverted inlet venturi. A non-overloading backward-inclined airfoil wheel provides high airflow with a long motor life. These fans operate at a reduced noise level and are designed to accommodate a variety of heaters for use on drying bins where higher capacities are required. Models are available from 5 - 50 HP with static pressures up to 11".

3500 RPM CENTRIFUGAL FANS

GSI also manufactures a 3500 RPM centrifugal fan designed to operate in static pressures up to 22". These fans are used primarily with tall tanks or small grains tanks with high resistance to airflow.

TOTAL VALUE. TOTAL SYSTEMS.™

GSI HEATERS INCLUDE:

- Patented “Blue-Burn” optimizer on propane (LP) models.
- Transition high-limit switch.
- Liquid filled pressure gauge.
- Automatic ignition shutoff after proof of flame for extended ignitor life.

STANDARD HEATERS FEATURES:

- Mechanical, normally closed, flame switch with time delay reset which is electronically monitored for greater safety.

DELUXE HEATERS FEATURES:

- Pipe train and burner design allows heater to work HIGH-temp or LOW-temp (down to 10 degree temperature rise).
- Solid-state flame sensing using flame conduction.
- Self-diagnosing “Smart” board with a 3-year warranty.
- Large, easy-access door with clear view window.
- 10 second purge delay.

VANE AXIAL DOWNSTREAM HEATERS

Whether natural air-drying grain or heat drying, all GSI “drying” fans have the option of adding a heater. With capacities up to 3.0 million BTU/hr., our vane axial fan and heater combination provides the very best in high capacity grain drying. Vane axial heaters are available in 18” through 28” diameter, liquid propane, propane vapor or natural gas models.

CHI-TOWN UPSTREAM HEATERS

GSI’s “Chi-Town” heater is a low to medium temperature grain drying system that is typically used with GSI’s centrifugal fans. Capable of .3 to 1.1 million BTU/hr., and available in propane vapor or natural gas, “Chi-town” is perfect for the drying/aeration of rice, corn or other select grains.

CENTRIFUGAL DOWNSTREAM HEATERS

GSI’s downwind centrifugal burner is a high efficiency option to compliment our high capacity centrifugal fans. Specially designed burners are adjustable for uniform heating temperatures with a choice of liquid propane, propane vapor or natural gas. Available for GSI’s 1750 RPM (10-40 HP) centrifugal models, the downwind centrifugal burner is capable of capacities up to 4.2 million BTU/hr.

GSI uses heavy-duty motors to withstand years of use in a variety of climates and conditions.

All GSI control boxes are weather-resistant with heavy-duty Start and Stop switches.

Transitions are available to connect GSI fans to bins, aeration ducts, or concrete entrance ways.

Humidistats or thermostats available.

COMPLETE SYSTEMS...

GSI is a complete systems manufacturer offering a complete selection of grain storage, conditioning and handling equipment and accessories including:

- Commercial and Farm Bins
- Bucket Elevators
- Chain and Belt Conveyors
- Chain Loops
- Portable and Tower Dryers
- Top Dry Systems
- Fans, Heaters, and Transitions
- Bin Unloading Equipment

Contact your local dealer, or call GSI at 1-888-GSI-BINS for more information.
